

Management Information Services Public Health - Seattle & King County

Workforce Business and Functional Requirements

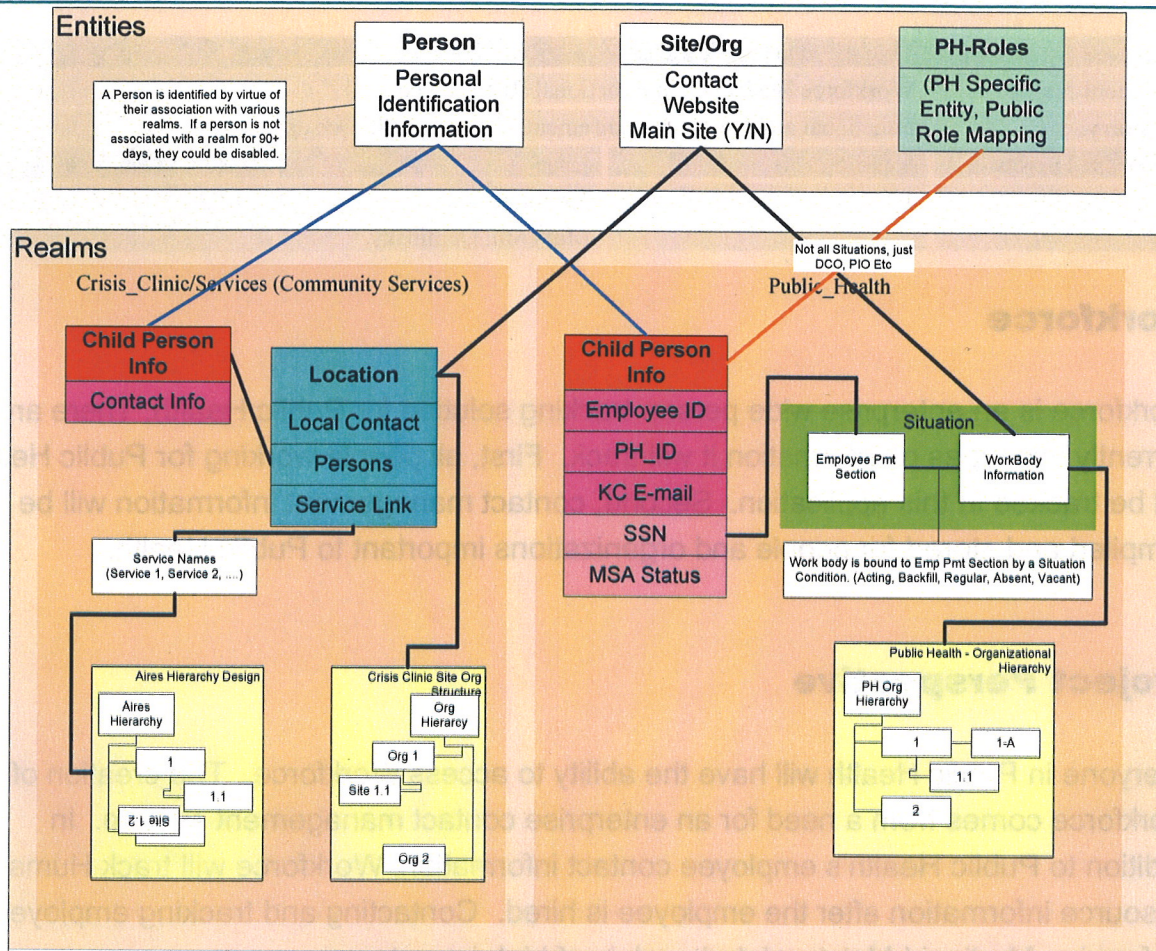

Figure 1 Workforce Model

Workforce will be built with minimal updates to current business processes. The process goal of Workforce is to have one point of data entry and data management, which will update most of the other systems. This is currently not possible based on technology and rights Public Health has with their parent organization. Because of these different stages of the process goals, Workforce will be built with both the interim and final processes in consideration.
